A. Read the following 'Case Study about a Surgical Patient' and complete it with a/an or the:

Followingautomobile accident, Juan, a 37-year-old man, was in operating room with a fractured left femur, left tibia, and fibula. He also had severe compound fracture of the right tibia and fibula with a near amputation. While the anesthesia personnel were starting intravenous lines, two surgeons and circulator were standing near the patient's right leg. The surgeons were laying out their operative approach to the circulator and surgical technologist in the first scrub role. Juan asked three consecutive times, "What is wrong with my left leg?" first two times the anesthesia provider said, "Your left leg will be fine." Upon the third asking, the surgical technologist said, "Juan,
